
Causal Effect of Diagnoses on Inpatient Length of Stay (LoS)
Bubble size = Volume (% of hospital admissions) | Error bars = 95% Confidence Interval (DML-IRM)
← Shorter Hospital Stay
Extends Hospital Stay (Days) →
Hip/Femur Fractures:
+14.09 days delay
Diagnostic Ambiguity:
+2.53 days causal delay
(28.0% of all admissions)
Hip & Femur Fractures
Musculoskeletal Trauma
Severe Pneumonia & Lung Infection
Heart Attack & Cardiac Shock
Sepsis & Severe Systemic Infection
Spinal & Joint Disorders
Stroke & Acute Neurological
★ Diagnostic Ambiguity (Uncoded Diagnosis)
Bone & Soft-Tissue Musculoskeletal
Digestive & Oesophageal Cancers
Cerebrovascular & Nerve Disorders
Severe Kidney Infection / Pyelonephritis
Arterial Thrombosis & Vascular Disease
Cardiomyopathy & Heart Disease
Valvular & Inflammatory Heart Disease
Chronic Respiratory Conditions
Metabolic & Electrolyte Disorders
Kidney & Urinary Conditions
Cardiac Arrhythmias & Conduction
Skin & Subcutaneous Conditions
Liver & Pancreatic Conditions
General Clinical Surveillance
Urinary Symptoms & Haematuria
Gynaecological Conditions
Oral & Upper Respiratory
Gastrointestinal Infections
Bladder & Kidney Disorders
General Intestinal Disorders
Inflammatory Bowel Disease
Chronic Bronchitis & COPD
Peptic Ulcer & GI Bleeding
Iron Deficiency Anaemia
Wheezing & Bronchospasm
Non-cardiac Chest Pain
Non-specific Abdominal Pain
Post-Surgical Cancer Surveillance
